# Choose your favorites

**237 illustrated selections for Northwest Florida**

Browse plants for your landscape, save the choices you like, and share the plant IDs with Pure Earth. Final selection depends on your site and nursery availability.

### Open the interactive plant selector

Save favorites online and compare them with this guide.

plants.pureearthlandscaping.com

### Use the plant IDs

Each profile carries the same plant ID as the online selector. IDs are stable references, not page numbers, so there are gaps. Related plants are grouped together in this guide.

### Read the dimensions

H is height and W is width. Dimensions are approximate mature landscape ranges unless marked otherwise. Turf entries show mowing height. Vines and spreading plants may not have a fixed final width. Series-level choices require an exact cultivar before final sizing.

### Check the site notes

A local nursery offering is not automatically suited to an exposed beach lot. Cold, salt spray, drainage, sun and mature space all matter. Special-site choices need closer review before planting.

### Know what the images show

All plant profile images are clearly labeled AI illustrations. They are visual guides, not photos of current nursery stock, botanical identification evidence or a promise of the delivered plant.

# Plan for your site

**Coastal and inland conditions**
Check wind, direct salt spray, irrigation salinity, drainage and winter lows. A sheltered inland bed differs from an open beach lot. Reserve space for mature canopies and roots, and check overhead utilities, structures and HOA requirements.

**Cold sensitive plants**
Tropical palms, bird of paradise and several flowering accents need protected-container use or a site-specific cold assessment. Freezing duration, plant age and establishment affect damage. No hardiness figure guarantees survival.

**Water and soil**
Use the right plant for the bed. Drought-tolerant choices still need establishment watering; moisture-loving plants still need appropriate drainage. Acid-loving shrubs and blueberries may struggle in alkaline fill. Avoid placing all plants on the same irrigation schedule.

**Natural areas and dunes**
Use nursery-grown stock. Do not collect plants from dunes. Coastal work may require permits and approved species. Contain plants with spread or escape concerns, keep them out of natural areas and consider suitable native alternatives.

**Children and pets**
Some ornamental choices are toxic if eaten, including coontie, sago palm, oleander, azaleas and Carolina jessamine. Other plants have thorns, spines or irritating sap. Check placement around children and pets; do not treat ornamental plants as food.

**Before a quote is finalized**
Confirm the exact species or cultivar, current stock, container grade, quantity, plant health and site suitability with Pure Earth. Nursery list references document offerings at a point in time and do not confirm present stock. Final installation spacing is a design decision, not simply the mature width.

Healthy nursery form shown. Illustrative plant, not actual inventory; cultivar and season affect appearance.

MATURE SIZE H x W

1-3 ft H x 1-3 ft W; cultivar varies

LIGHT

Sun or shade, cultivar dependent

SITE NOTES

Colorful foliage for beds and containers; match the cultivar to exposure. Frost tender warm-season annual. Pinch for branching; sun tolerance varies greatly.

SEASONAL COLOR

Special site or care

# 124 Bloomify Red Lantana

*Lantana camara 'UF-1013A-2A' (Bloomify Red)*

AI ILLUSTRATION | NOT CURRENT NURSERY STOCK

Healthy nursery form shown. Illustrative plant, not actual inventory; cultivar and season affect appearance.

SEASONAL SIZE H x W

Approx. 17-21 in H x 30-36 in W in Florida field trials

LIGHT

Full sun

SITE NOTES

Approximate size in UF Florida trials after five months, not an ultimate limit. Named infertile cultivar evaluated separately by UF/IFAS; buy the exact tag, not generic L. camara. Freeze dieback possible. **Toxic if eaten.**

EDIBLE LANDSCAPE

Special site or care

# 126 Nagami Kumquat

*Citrus japonica 'Nagami' (syn. Fortunella margarita)*

AI ILLUSTRATION | NOT CURRENT NURSERY STOCK

Substantial nursery-container form shown. Fruit is illustrative, not a yield, season or delivery guarantee.

MATURE SIZE H x W

8-10 ft H x 6-8 ft W; rootstock varies

LIGHT

Full sun

SITE NOTES

Compact self-fruitful citrus suitable for large containers or protected garden sites. Cold-hardy citrus, not freeze-proof in every condition. Protect young or container trees; drainage and pest monitoring remain important. Standard trees on vigorous rootstocks may grow larger.

EDIBLE LANDSCAPE

Special site or care

# 125 Satsuma Mandarin

*Citrus unshiu*

AI ILLUSTRATION | NOT CURRENT NURSERY STOCK

Substantial nursery-container form shown. Fruit is illustrative, not a yield, season or delivery guarantee.

MATURE SIZE H x W

10-12 ft H x 10-12 ft W; rootstock varies

LIGHT

Full sun

SITE NOTES

Self-fruitful citrus; Owari and Brown Select are established regional choices. Among the hardier citrus, but young trees and new growth need freeze protection. Use well-drained sheltered sites and certified nursery stock; citrus disease care still required.

Special site or care

# 129 Rosemary

*Salvia rosmarinus (syn. Rosmarinus officinalis)*

AI ILLUSTRATION | NOT CURRENT NURSERY STOCK

Healthy nursery form shown. Illustrative plant, not actual inventory; cultivar and season affect appearance.

MATURE SIZE H x W

2-6 ft H x 2-5 ft W; upright cultivars

LIGHT

Full sun

SITE NOTES

Fragrant evergreen herb; upright and trailing forms serve different landscape roles. Choose a locally proven hardy cultivar. Sharp drainage and airflow are critical in humid summers; avoid constantly wet irrigation zones. Trailing cultivars are much lower.

# Images and sourcing

**Cover photograph**
The cover features a landscape photograph supplied by Pure Earth.

**AI illustrations on every profile**
All profile images, including plants in nursery-style pots, turf and established trees, are AI-generated or AI-edited representative illustrations. They are not photographs of supplier inventory, actual nursery stock or a guaranteed delivered plant. Named cultivar details may differ from the illustration.

**Scale and appearance**
Container sizes, trained forms and clear trunks are illustrative unless a current supplier specification is confirmed. CT means clear trunk from ground level to the first live branch or frond attachment, not total height. Color, flowering, fruit and fullness change with age, season, pruning and growing conditions.

**Plant information**
Profile information combines horticultural references and the supplied regional nursery lists. Dimensions are general planning ranges, not warranties. For series names and broad cultivar groups, verify the exact named plant before relying on a size or flowering trait. Plant-specific reference links are provided where available.

**Nursery availability**
The guide includes illustrated regional candidates and plants needing special sites or care. A listing, including an older list entry, does not establish present availability or suitability for every local property. Unresolved nursery names and unillustrated entries are not presented as finished selections.

**Use this as a selection guide**
Compare general appearance and habit, then confirm the exact plant and conditions with Pure Earth. This is a curated illustrated selection for client discussion, not a botanical identification key, a live inventory or an exhaustive list of nursery offerings.

# Your plant shortlist
